

There isn't any proof that CO2 is the cause of warming. If we look at Geological time,

Late Carboniferous to Early Permian time (315 mya -- 270 mya) is the only time period in the last 600 million years when both atmospheric CO2 and temperatures were as low as they are today (Quaternary Period).

Temperature after C.R. Scotese
CO2 after R.A. Berner, 2001 (GEOCARB III)

Presently the world is

- At very low CO2 levels,
- At low temperature levels,
- Atmospheric CO2 appears unrelated to temperature, as is the case with temperature records, where temperatures can fall during periods of increasing CO2 and vice versa.
